

ABSTRACT

According to the invention, there is provided an inbred corn plant designated 5750. This invention thus relates to the plants, seeds and tissue cultures of the inbred corn plant 5750, and to methods for producing a corn plant produced by crossing the inbred corn plant 5750 with itself or with another corn plant, such as another inbred. This invention further relates to corn seeds and plants produced by crossing the inbred plant 5750 with another corn plant, such as another inbred, and to crosses with related species. This invention further relates to the inbred and hybrid genetic complements of the inbred corn plant 5750, and also to the SSR and genetic isozyme typing profiles of inbred corn plant 5750.
